FINAL

Attachment to BMF MeF Schemas for Tax Year 2026

Date: 11/05/2026

For Official Use Only

This document is confidential and is intended solely for the use and information of the Internal Revenue Service

Document History

Date	Summary of Changes
7/5/2017	• Updated Tax Years and dates • Removed section on Security Element Testing
8/8/2017	• Updated appendices with Device ID code Implementations and attached code • Updated IP Port Timestamp information
9/12/2017	• Updated introductory text • Attached most current version of Device ID code in Appendices A – C and updated Appendix C instructions • Updated Field Name in Section 3 from 'PersonName' to 'PersonFullName' • Added entry to Known Issues when Signing Officer (1120, 1065) is foreign and does not have an SSN
11/2/2017	• Added Trusted Customer documents
7/14/2018	• Updated embedded Trusted Customer documents • Updated guidance on Signing Officer / Fiduciary section
8/31/2018	• Updated URL for IPv6 multicast addresses • Updated Appendix C with new Browser Based Device ID code
8/27/2019	• Added section for Exception and invalid Device ID values • Added section for Federal Original Submission ID • Added section for Claiming Salaries and Wages • Added section for SSN of Signing Officer, Fiduciary, or Person Signing for Fiduciary • Updated Appendix C with new Browser-Based Device ID Java-Script • Renumbered Sections
8/25/2020	• Added section for Authentication Related Fields • Updated Trusted Customer with new Trusted Customer documents • Updated Security Summit Fields by Tax Type • Updated Enumerated MeF Elements and Group Definitions • Added List of MeF Business Rules for Security Summit Elements • Updated Appendix C with new Browser-Based Device ID Java-Script • Renumbered Sections
10/9/2020	• Updated Authentication Assurance Level Code guidance • Updated Authentication Review Code guidance • Updated Out-of-Band Security Verification Code guidance • Added Information Return Indicator section • Updated Vendor Control Number guidance
7/16/2021	• Updated tax year and filing season throughout. • Updated all sections with minor edits for clarity • Updated NIST 800-63B Standard Programming Guidance • Updated Authentication Review Text Field guidance
8/25/2021	Updated Trusted Customer documents
9/21/2021	Updated Appendix C with new Browser-Based Device ID Java-Script
10/27/2022	• Updated Trusted Customer Documents • Updated Appendix C with new Browser-Based Device ID Java-Script

Date	Summary of Changes
9/29/2023	• Updated Trusted Customer Document • Updated Out-of-Band • Added note regarding the Federal Trade Commission Safeguards Rules • Updated Appendix C with new Browser-Based Device ID Java-Script
06/16/2025	• Updated Authentication Review Code Fields with Cryptocurrency Refund Disbursement Method • Updated Device ID coding (IRS DeviceID code for TY2025) with additional information for Filing Season 2026 that can use either SHA-1 or SHA-256 algorithms • Added new sections for Ultimate Bank Information • Updated SSN/ITIN of Signing Officer, Fiduciary, or Representative Signing for Fiduciary with updated tax types • Updated Security Summit Elements by Tax Type table updating tax types and fields • Updated Enumerated MeF Elements and Group Definitions with updated tax types • Renamed MeF Business Rules for Total Prior Year Income to MeF Business Rules for Other Return Header Fields and added new business rules • Added new section for MeF Business Rules for Device ID and IP Address • Added new section for MeF Business Rules for Ultimate Bank Account
07/18/2025	• Updated IP Address Data Elements Related guidance • Updated Device ID guidance • Updated Security Summit Data Elements by Tax Type, added Form 709 • Updated Enumerated MeF Elements by Tax Type, added new data elements and updated descriptions on existing elements • Updated MeF Business Rules for Device ID and IP Address with updated business rules
10/30/2025	• Updated Ultimate Bank Account fields for 990, 990EZ, 990PF and 990T that share a return header schema, removed Forms 2290 and 5227 since UBA fields were not added to these forms and added information regarding direct deposit for Form 8849 • Added new tax types 1120-L, 1120-PC, 1120-REIT, 1120-RIC that will be added to MeF and deleted 1065-B which can no longer be e-filed • Updated Security Summit Data Elements by Tax Type, with additional tax types (1045IND (Individual), 1045EST (Estate or Trust), 1120L, 1120PC, 1120REIT, 1120RIC, and 1139) that will be added to MeF and updated the Vendor Control Number prefix from two characters to three characters
03/31/2026	• Updated tax year 2025 to 2026 and processing year 2026 to 2027 where applicable • Moved Protect Your Clients and Your Business information to its own section • Multiple sections were moved throughout the document, grouping them int three groups, Digital Identity Guidelines for authentication, Ultimate Bank Account regarding refund disbursement and Filing Security Data Elements • Sections were renamed to align with information/topic covered in section • Added sections to clarify Total Preparation Submission Timespan, Total Active

Date	Summary of Changes
	Time Preparation Submission Timespan, and Vendor Control Number • Refund Disbursement Code "6 – Other 1" is being repurposed to Credit Elect, updated throughout document where referenced • Added missing values for Refund Disbursement Codes in some sections • Combined Security Summit Data Elements business rules into one table, added severity, added two missing rules and updated bypass conditions • Added Bank Account Data Captured Timestamp at Creation to Security Summit Data Elements Definitions and Enumerations section
08/24/2026	• Added new section for Electronic Filing Identification Number (EFIN) Validation API • Updated Vendor Control Number section with API implementation • Added new sub-section with MeF Filing treatment when Vendor Control Number registration information does not match • Updated Security Summit Data Elements Business Rules table with applicable VCN business rules
10/28/2026	• Corrected definition for Temporary Bank Account Indicator • Corrected guidance for Direct Deposit to a **new** reloadable Prepaid Card in Scenario A: Refund Product Selected • Updated Vendor Control Number Registration process

Introduction

This document provides a single source where users can consult to understand the security summit elements that have been incorporated into the BMF Return Header schemas for Tax Year 2026 / Processing Year 2027. This document will accompany each schema release that's distributed through the Secure Object Repository (SOR). Questions regarding security summit elements should be submitted to mefmailbox@irs.gov.

Considering our partnership with states and industry leaders, the number of confirmed identity theft returns has declined significantly since the formation of the Security Summit in 2015. We continue to make progress and need your cooperation to continue this momentum in filing season 2027. To assist the IRS and states in determining whether the e-filed return is from a legitimate filer, the Security Summit has developed trusted customer requirements for tax preparation software used by tax professionals. These authentication/trusted customer data elements have been added to federal and state XML schemas. As part of these requirements, industry will program their software's to provide IRS and states with information gathered during the tax return preparation process. Some of these fields were added in prior schema versions and can be new for this filing season. Your participation is key to our success. Here's why:

- These fields have high correlation with fraudulent returns: We've verified this data through return analysis and/or back tested with industry assistance during filing season.
- Additionally, other elements have high correlation with good returns: Correct values provide high confidence in taxpayer's legitimacy.

Many of the Security Summit data elements are optional in the XML schemas with no associated business rules. Some are required in the XML schema, and some are optional and enforced through business rules. However, the expectation and commitment of Security Summit participants (based on the signed Memorandum of Understanding) is that the appropriate software programming is in place and that the data elements are populated. The expectation for all our software providers is that all data elements in the XML schemas are programmed and that if applicable to the return, a value is provided.

Protect Your Clients and Your Business

The Security Summit newsroom contains information on various Awareness Campaigns to help protect your business and clients, along with other helpful information regarding business identity theft. This information can be found on Security Summit.

IP Address

Business Return Header Schemas only have one IP Address data element at submission filing and are required for all business returns since Filing Season 2026. In addition, to being required, business rules were also added to reject business returns with private or reserved IP Addresses.

The information contained in Individual Returns IP Port Number Implementation, does not apply to business returns. It simply provides information as to how we are implementing this functionality for individual returns.

Individual Returns IP Port Number Implementation

Since Tax Year 2017, Form 1040|1040NR Return Header Schemas have included two IP Port Number data elements. It is important to make the distinction between "IP Port at Creation" (IPPortNum) and "IP Port at Submission" (FinalIPPortNum). For other data elements in the schema, we currently define "submission" as the last step when the software sends the return data to the IRS (e.g. timestamp). In terms of IP and Port, it is slightly different, being the last time that the taxpayer interacts and sends data over the internet to the software company. Therefore, the two data elements can be defined in the following ways:

- Port number at Creation: From the first IP Packet header received from the taxpayer by your software, we are asking for the collection of the 'source port' (UDP/TCP) of the source IP Address.
- Port number at Submission: From the last IP Packet header received from the taxpayer by your software, we are asking for the collection of the 'source port' (UDP/TCP) of the source IP Address. This source IP Address and source port number should be collected at the last possible point of communication prior to the final packaging of the XML for return finalization and transmission.

For the above requested source IP address and source port number to have value, they must coincide with timestamps collected as part of the return. The IP Port information at creation and submission must be collected while the Device ID information at creation and submission is collected. This will allow for the timestamp (SystemTs) in DeviceInfoCommonElements to apply to both the IP Port and Device ID.

The IRS' utility for these data elements is twofold, for both NATted end-user network identification and anomaly detection. It is important to note that the IRS does **not** find value in the destination port number of your firewall,

gateway, software's internal server, or any other NAT device or the port number involved in any associated with the source IP Address of the taxpayer.

Public vs. Private IP Addresses

As of Tax Year 2025, only Public IP Addresses are accepted on business returns; Private and Reserved IP Addresses will not be accepted. Private IP Addresses are set aside by the Internet Assigned Numbers Authority (IANA) to be reserved for internal network communications. If your software uses a corporate virtual private network (VPN) or internal private network to transmit and submit returns, you will be required to capture the **outfacing public IP Address** of the user that has connected to your network.

IP Version 4 (IPV4) Reserved List[1]

Range	Comments
0.0.0.0 – 0.255.255.255	Used for broadcast messages to the current ("this") network as specified by RFC 1700
10.0.0.0 – 10.255.255.255	Used for local communications within a private network as specified by RFC 1918
100.64.0.0 – 100.127.255.255	Used for communications between a Service Provider and its subscribers when using a Carrier-grade NAT, as specified by RFC 6598
127.0.0.0 – 127.255.255.255	Used for loopback addresses to the local host, as specified by RFC 3330
169.254.0.0 – 169.254.255.255	Used for auto configuration between two hosts on a single link when no IP address is otherwise specified, such as would have normally been retrieved from a DHCP server, as specified by RFC 3330
172.16.0.0 – 172.31.255.255	Used for local communications within a private network as specified by RFC 1918
192.0.0.0 – 192.0.0.255	IETF Protocol Assignments
192.0.2.0 – 192.0.2.255	Documentation (TEST-NET-1)
192.31.196.0 – 192.31.196.255	AS112-v4
192.52.193.0 – 192.52.193.255	AMT
192.88.99.0 – 192.88.99.255	Deprecated (6to4 Relay Anycast)
192.168.0.0 – 192.168.255.255	Used for local communications within a private network as specified by RFC 1918
192.175.48.0 – 192.175.48.255	Direct Delegation AS112 Service
198.18.0.0 – 198.19.255.255	Used for testing inter-network communication between two separate subnets as specified in RFC 2544
198.51.100.0 – 198.51.100.255	Documentation (TEST-NET-2)
203.0.113.0 – 203.0.113.255	Documentation (TEST-NET-3)

FF00:0000:0000:0000:0000:0000:0000:0000 - FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF	Multicast Communication

Device ID

The BMF return headers include two Device ID data elements At Creation and At Submission filing but do not include any detailed Device ID elements like individual returns. As of Tax Year 2025, software developers may utilize IRS provided scripts to collect either a SHA-1 (40 characters) or SHA-256 (64 characters) Device ID for all submissions. Please refer to Appendices A through C for the code that should be used by all software developers when creating the Device ID.

We recommend all providers transition to the SHA-256 algorithm which provides more robust security measures. **SHA-1 support will be discontinued.**

Individual Returns Device ID Browser Component Samples

This section does not apply to business returns. It provides information as to how we have implemented this functionality for IMF returns and collected since Tax Year 2016. If these detailed Device ID elements prove to be successful in helping to identify refund fraud, there is reason to believe that they may be added to the BMF Return Header Schemas in the future.

Data Element	Sample
User Agent at Submission (UserAgentTxt)	• Mozilla/5.0 (iPad: CPU OS 9_3_1 like Mac OS X) AppleWebKit/601.1.46 (KHTML, like Gecko) Version/9.0 Mobile/13E238 Safari/801.1 • Mozilla/5.0 (iPhone: CPU iPhone OS 9_3_2 like Mac OS X) AppleWebKit/601.1.46 (KHTML, like Gecko) Version/9.0 Mobile/13F69 Safari/601.1 • Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_5) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/50.0.2661.102 Safari/537.36 • Mozilla/5.0 (Windows NT 10.1; WOW64) AppleWebKit/537.36 (KHTML, like Gecko) • Chrome/50.0.2661.102 Safari/537.36
Browser Language (BrowserLanguageTxt)	• en-us • es-es
Platform at Submission (PlatformTxt)	• iPad • iPhone • MacIntel • Win32
Time Zone Offset at Submission (TimeZoneOffsetNum)	• 240
System Time at Submission (SystemTs)	• Wed May 25 2016 08:59:38 GMT-0400 (EDT) • Wed May 25 2016 08:00:19 GMT-400 (Eastern Daylight Time)

Device ID Exception Values and Invalid Values

Based on assessments of Security Summit data element quality, IRS has observed certain instances where software providers are unable to collect the **Device ID – At Creation** or **Device ID – At Submission** and transmit a default Device ID value. In adherence with IRS guidance on Device ID computation requirements, the valid exception values to be provided under these circumstances are:

Application	Exception Value
SHA-1 Desktop	6C9B1A35775087DBDB8A6D25ECA509C7F6C27838
SHA-1 Browser	AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA
SHA-256 Desktop	3A73603DDECFB19A07F4722AF06A4C71E929376F8DF186A29405B2F12C286705
SHA-256 Browser	AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA

Digital Identity Guidelines

The National Institute of Standards and Technology (NIST) Digital Identity Guidelines, Special Publication (SP) 800-63-4, provide guidelines for identity proofing and authenticating users. For these guidelines, digital identity is the unique representation of a subject engaged in an online transaction. A digital identity is always unique in the context of a digital service but does not necessarily need to uniquely identify the subject in all contexts. In other words, accessing a digital service may not mean that the subject's real-life identity is known. Identity proofing establishes that a subject is who they claim to be. Digital authentication establishes that a subject attempting to access a digital service is in control of one or more valid authenticators associated with that subject's digital identity.

Assurance Levels Overview

NIST published Enrollment and Identity Proofing Requirements in June 2017. These guidelines were incorporated for Processing Year 2019 and are described below.

	Identity Assurance Level (IAL)	Authenticator Assurance Level (AAL)	Federation Assurance Level (FAL)
NIST Document	SP 800-63A-4	SP 800-63B-4	SP 800-63C-4
NIST Description	Deals with the processes for enrolling an individual in an identity system through identity proofing	Provides guidance on the selection, use, and management of authenticators to authenticate a remote subscriber to an identity system	Provides guidance on the technical methods for exchanging authentication information between Identity Providers (IdPs) and Relying Parties (RPs)
General Use	Identity proofing a new user, customer, preparer, etc.	Authenticating, managing login, of existing users	Using a federated source for authentication | login

	Identity Assurance Level (IAL)	Authenticator Assurance Level (AAL)	Federation Assurance Level (FAL)
Assurance Levels	**IAL1:** Documentation provided by the user is **NOT** validated or verified, or the process does not fully meet IAL2 requirements	**AAL1:** Some assurance using any one authenticator	**FAL1:** Bearer assertion, signed by Identity Providers
	IAL2: Documentation provided by the user is validated[3] as legitimate against the issuing source or an authoritative source and verified[4]	**AAL2:** High confidence. Proof of possession and control of two distinct authentication factors is required through secure authentication protocol(s)	**FAL2:** Bearer assertion, signed by Identity Providers and encrypted to Relaying Parties
	IAL3: In person collection, validation and verification of data with biometrics	**AAL3:** Very high confidence. Requires a hardware-based authenticator and an authenticator that provides verifier impersonation resistance	**FAL3:** Holder-of-key assertion, signed by Identity Providers and encrypted to Relying Parties

For the combination of documents to match each assurance level, please consult the NIST guidelines.

Trusted Customer Requirements Overview

Industry, state, and IRS partners acknowledge that while some fraudulent filings will still occur, all parties must proactively take steps to reduce and prevent fraud. The Security Summit established a set of minimum requirements to present a consistent standard for front-end customer identity authentication using recognized national standards from the National Institute of Standards and Technology (SP-800-63-4) and the IRS Office of Safeguards.

Industry will use these standards and methodology to help deter potential identity theft tax refund fraud activity, which going forward will be based on increasingly stringent and effective national standards and protocols. To preserve innovation and creativity, Industry

[3]Driver's License is checked against the State DMV records, or a source with access to those records
[4] Document matches and is currently in the possession of the user

partners may choose to, and are encouraged to, exceed the minimum standards and conduct their own independent and unique analysis, based on patterns or trends they observe and identify. Beginning with Processing Year 2019, tax software providers must implement and comply with these standards when preparing and submitting tax returns. These minimum requirements are reviewed and updated each year.

Copies of these standards are included in the attached files.

FS2027 DIY Trusted Customer Requirements FINAL 11052026

FS2027 Tax Pro Trusted Customer Requirements FINAL 11052026

The guidance provided in this document does not replace the regulations and rules set by the Federal Trade Commission's (FTC) Safeguards Rules. If guidance in this document conflicts with the rules set by the FTC, the FTC rules will be considered authoritative guidance. All persons and entities who receive taxpayer's personal information can use Publication 4557, Safeguarding Taxpayer Data, A Guide for Your Business, to help determine their data privacy and security needs and implement safeguards to protect the information.

Authentication Assurance Level Codes

The purpose of xAL[5] (Identity, Authentication, and Federation) is to identify the assurance levels associated with the Digital Identity processes offered to taxpayers and preparers. These columns should not reflect the exact level of factors used for each tax return but rather should be populated the same for all tax returns for a software package, based on the authentication methods offered.

Population of xAL is now coded across three-line items and must use acceptable enumerations or will result in a rejection of the submission.

Assurance Level	Data Element	Schema Enumeration
Identity	IdentityAssuranceLevelCd	IAL1, IAL2, IAL3
Authentication	AuthenticationAssuranceLevelCd	AAL1, AAL2, AAL3
Federated	FederatedAssuranceLevelCd	FAL1, FAL2, FAL3

- If the information from a government-issued identification is entered by the taxpayer or collected by a preparer, then code IAL1 in the Identity Assurance Level Code. If not, do not populate the code. The IRS does not expect to see IAL2, unless the provider is querying against an issuing or authoritative source (i.e. checking the

[5] When described generically or bundled, xAL refers to IAL, AAL, FAL. Each xAL has three assurance levels

validity of a driver's license and its information with its state DMV, AAMVA, Lexis Nexis, etc.).

- If the government-issued identification is entered for only **one** spouse, code IAL1 in the Identity Assurance Level Code if the identification is for the primary taxpayer. If the identification entered is for the secondary taxpayer, do not populate the field.
- If the software allows for the use of an unrestricted factor, code all returns for that software package as AAL2 in the Authentication Assurance Level Code. If not, then code AAL1.
- IRS does not expect to see anything coded in Federated Assurance Level Code at this time. The IRS will provide additional guidance as necessary when it comes time to populate this data element.

Authentication Review Codes

The objective for incorporating NIST SP 800-63B-4 authentication standards is to strengthen existing procedures and provide secure customer logins. **Software companies should offer the use of at least one unrestricted authentication factor for multi-factor authentication (MFA).**

As of 2017, compliance with NIST SP 800-63B-4 requires industry to offer at least one unrestricted authentication factor for MFA:

- **Account Creation**
  - Leverage the existing authentication infrastructure and include at least one unrestricted authentication factor (e.g. PIN, secret grid, printed secret grid) for client opt-in
  - Continue reducing the use of email as a factor in the account creation and login process
- **Account Recovery**
  - Reduce reliance on email account recovery and expand use of recovery through unrestricted and restricted authentication AAL options, such as SMS

Authentication Review Code Assignment

To ensure the cleanest data quality across the Authentication Review codes, populate using the guidance listed below.

- Each return should receive values 5, 6, and 7 if applicable a maximum of one time each, marking for the filing of the return
- Please attempt to enter the values in numerical order if applicable (i.e. 5, then 6, then 7

IF	Then
0 – IMF Auth	Only populate when instructed by the IRS
1 – BMF Auth	Only populate when instructed by the IRS
2 – TRUSTED CUST	Only populate when instructed by the IRS
3 – LEADS	Only populate when instructed by the IRS
4 – SCHEME	Only populate when instructed by the IRS
5 – AUTHENTICATION	It is critical to track and pass this value on IRS and State XML Schemas to identify all individual filers or preparers who used an unrestricted factor to access their account. This includes a user's election to opt-in to the use of the unrestricted factor or are required to use it by the application.
6 – SSN DUP	For Online DIY, when a primary and/or secondary SSN is used in a new current-year account but was associated with a different account in the current or prior year, software providers should, if capable, include the value "6 – SSN DUP" with the filing of the return
7 – OTHER	If the Refund Disbursement Code has a value of "5" (Cryptocurrency), then pass a value of "OTHER" and include the disbursement information (e.g. number of the wallet) in the corresponding Authentication Review Text Field

Out of Band Security Verification Code

OOB Security Verification Code (OOBSecurityVerficationCd) serves as a pair for Authentication Review Code and provides the opportunity to identify the method of multi-factor authentication (MFA) the filer uses.

Since processing year 2024, software providers must require all taxpayers to validate a second factor (email address or phone number) prior to submitting a return electronically. Limitations on number of electronically filed returns from one email address or one phone number must be applied. This requirement was introduced to reduce the ability for bad actors to create online tax accounts at massive scale as it is believed that bad actors only have access to a finite amount of unique email addresses and phone numbers. In addition, these requirements do not differentiate between the traditional login experience and situations where a taxpayer may have forgotten their username and/or password (i.e. Account Recovery). All access to an online account should be secured with the same level of security. This change is also intended to bring clarity to developers and programmers as they are asked to implement these requirements.

OOB Security Verification Code Assignment

If	Then
No authentication was performed	Do not populate the field / Do not include the data element in the XML Schema
The filer completed login with a code sent via email	Code the applicable value of • 00 = Can't send email • 01 = Bounced email • 02 = Sent email one way • 03 = Full Out of Band email
The filer completed login with a code sent via text	Code the applicable value of • 04 = Can't send Text • 05 = Bounced Text • 06 = Delivered Text one-way • 07 = Full Out of Band Text
The filer completed login with third party generated secret	Code value of 08 – Random 3rd Party Security Questions
The filer completed login with secret established by Industry	Code value of 09 – Security Questions established by Industry
The filer completed login with secret established by customer	Code value of 10 – Security Questions established by Customer
The filer uses an unrestricted factor and receives an Authentication Review code of "5"	Code value of 11 – Other Pass
The authenticator choice is not listed, such as a phone call or printed out code	Code value of 11 – Other Pass
The filer fails authentication with their unrestricted factor	Code value of 12 – Other Fail However, we do not expect to see this code populated since the population of the field should be linked with an accepted submitted return. If they fail OOB Security Verification the filer should not be allowed to submit a return.

For all software providers. The number of returns with an Authentication Review Code of "5" (Authentication – unrestricted factor) should equal the number of returns with a value of "11" or "12 in OOB Security Verification Code, unless you also offer an option not listed in the choices.

Form W-2 Count Associated with Employees Issued Form W-2

For business identity authentication, software providers are requested to prompt filers who claim a salaries and wages deduction on Forms 1065, 1120-F, 1120-H, 1120-L, 1120-PC, 1120-REIT, 1120-RIC, and 1120-S to enter the number of employees issued Form W-2 in the applicable tax year. Based on recent assessments of BMF Security Summit data element quality, the IRS has observed some instances where filers incorrectly enter either the

salaries and wages deduction amount reported on the return, or the summation of Forms W-2 wage amounts. With the objective of improving data quality, it is requested that software providers prompt filers to only report the distinct count of employees issued Form W-2.

Information Return Indicator

Set the Information Return Indicator to "Y" if information returns, such as W2's, 1099's, K1's, etc., are filed under the Employer Identification Number (EIN) shown on the return. Set the indicator to "N" if the entity does not submit information returns or submits them under a different EIN.

Total Income Amount from Prior Year Return

Comparable to the prior year Adjusted Gross Income (AGI) validation used for Individual filers, businesses submitting any business return are requested to provide the total income amount reported on their prior year return. Software providers should prompt filers not submitting a return in the prior year (e.g. first-time fliers) to enter a value of "0.00" for this data element.

Based on recent assessments of BMF Security Summit data element quality, IRS has observed some instances where filers incorrectly populate the Total Income Amount from Prior Year Return field with an alternative income amount such as taxable income or ordinary business income. With the objective of improving data quality, software providers should request per the line-item guidance listed directly below that filers report the total income or total income (loss) amount from the prior year return, and not an alternative prior year income value.

BMF line items to be referenced for populating Total Income Amount from Prior Year Return

Form	Total Income Line Item
1041	Total Income Line
1065	Total Income (Loss) Line
1120	Total Income Line
1120-F	Section II: Total Income Line
1120-H	Gross Income Line
1120-PC	Schedule A: Gross Income Line
1120-REIT	Part 1: Total Income Line
1120-RIC	Part 1: Total Income Line
1120-S	Total Income (Loss) Line

SSN/ITIN of Signing Officer, Fiduciary, or Representative Signing for Fiduciary

For business identity authentication, software providers are requested to prompt filers submitting Forms 720, 990, 990-EZ, 990-PF, 990-T, 1041, 1042, 1045EST, 1065, 1120, 1120-

F, 1120-H, 1120-L, 1120-PC, 1120-POL, 1120-REIT, 1120-RIC, 1120-S, 1139, 2290, 4720, 5227, 5330, and 8038-CP to provide the SSN or ITIN of the person signing the return.

In adherence with IRS guidance, the valid exception values are the following:

- If the person signing the return is foreign and does not have an SSN or ITIN, then populated with "888008888" or
- If the person opts not to complete this field, then populate with "999009999"

Based on assessments of BMF Security Summit data element quality, IRS has observed some instances where filers have reported a value which is neither a known SSN nor a valid exception value. These invalid values identified in IRS research include "000000000", "123456789" and "123123123". With the objective of improving data quality, software providers are requested to prompt filers enter a valid SSN or ITIN of the person signing or alternatively adhere to the valid exception values listed above for instances where the person signing does not have an SSN/ITIN or opts not to complete this field.

Authentication Review Text

During the filing season the IRS may direct software providers to use the Authentication Review Text field (AuthenticationReviewTxt) to identify return resubmissions related to legislative changes or workarounds. In these instances, IRS will provide specific guidance related to the appropriate use of this field. Unless directed, the Authentication Review Text field should only be used in the following situation.

Cryptocurrency Refund Disbursement Method

If the Refund Disbursement Code (RefundDisbursementCd) has a value of "5 – Cryptocurrency", then the information related to the disbursement, such as the number of the wallet, should be captured in the corresponding Authentication Review Text field.

Ultimate Bank Account

Ultimate Bank Account (UBA) means the routing transit number (RTN) and depositor account number (DAN) from which the taxpayer will ultimately gain access to its tax refund. The UBA must always be the last movement of funds known to the e-file provider at the time the return is prepared.

The Direct Deposit Group contains the bank account to which the IRS will disburse refund funds. Banking information in the Return Header (At Submission Creation Group | At Submission Filing Group) may match or differ from the Direct Deposit Group, depending on

the provider's business model. This distinction enables the IRS to identify cases where refund-related financial products are involved.

UBA fields are available on Form 8849; however direct deposit will not be supported in processing year 2027 and should not be populated until further notice. The Form 990x Return Header makes these fields available to Forms 990, 990EZ, 990PF, and 990T but only apply to Forms 990PF and 990T. Do not populate these fields for Forms 990 or 990EZ.

Basic Definitions

For this document, the following terms are defined as described below.

Term	Definition
Customer Identification Program (CIP)	A written CIP implemented by a bank under CFR Part 1020, which must be commensurate with the size and type of its business and include risk-based procedures for verifying the true identity of each customer to the extent reasonable and practicable. As described under 31 CFR §1020.220, CIP can be performed either through documentary means (e.g. reviewing a government issued ID) or non-documentary means (e.g. comparing personally identifiable information against a public database), or a combination of both. In addition, there are similar CIP requirements for money services businesses under 31 CFR §1022.210.
Early Access Products (EAP)	A pre-refund product that provides the taxpayer with early access to tax refund proceeds, which can be in the form of a loan or a fee free, nonrecourse advance of funds. The advance is repaid by direct deposit of the refund into a new taxpayer bank account set up for this purpose. An EAP typically allows the taxpayer to pay for tax preparation services and associated fees at the time that the tax refund is received instead of the time that the tax return is prepared and filed.
Prepaid Card	A reloadable prepaid card obtained through the tax provider at the time of tax preparation or filing. This is considered a separate and distinct disbursement option and reflected in the table below. Prepaid cards obtained by a taxpayer outside of the tax preparation process (e.g. prepaid card

Term	Definition
	purchased at a retail store) are treated as Bank Accounts for purposes of Refund Disbursement Codes
Refund Product	A Refund Transfer or an EAP that is obtained through the tax return provider at the time of tax preparation or filing. The Routing Transit Number/Depositor Account Number (RTN/DAN) associated with these products is tax software controlled and cannot be overridden by the tax preparer.
Refund Transfer	A post refund product, which provides the taxpayer with a new bank account to utilize for direct deposits of the refund instead of waiting for a paper check. The Refund Transfer typically allows the taxpayer to pay for tax preparation services and associated fees at the time that the tax refund is received instead of the time that the tax return is prepared and filed.
Cryptocurrency	A virtual currency obtained through the tax provider at the time of tax preparation or filing. This is considered a separate and distinct disbursement option and reflected in the tables below.
Proxy Account / Temporary Account	Accounts that are used when the refund vehicle is a financial product such as a new reloadable pre-paid card where the UBA may not be known at the time the return is prepared.

Refund Disbursement Requirements

All submissions **must include** Refund Disbursement Code and Refund Production Election Indicator. These fields determine whether bank account information is required in the Return Header (At Submission Creation Group | At Submission Filing Group). Although defined as optional in the schema, omission of these elements will result in submission rejection due to business rule validations.

Ultimate Bank Account Data Elements

No.	Element	Description	Values
1	Refund Product Election Indicator (RefundProductElectionInd)	Whether taxpayer elects a Refund Product or not	• 0 (No or False) - Did not elect a Refund Product • 1 (Yes or True) – Elected a Refund Product
2	Refund Disbursement Code	Taxpayer chosen settlement	• 0 – Balance

No.	Element	Description	Values
	(RefundDisbursementCd)	vehicle	Due/Zero Balance • 1 – Reloadable Prepaid Card • 2 – Bank Account • 3 – Paper Check • 4 – Non-reloadable Merchant Gift Card • 5 – Cryptocurrency • 6 – Credit Elect • 7 – Other 1
3	Routing Transit Number (RTN) (RoutingTransitNum in AtSubmissionFilingGrp/ RefundDisbursementGrp)	Routing transit number of the final known destination of the refund, Ultimate Bank Account	
4	Depositor Account Number (DAN) (DepositorAccountNum in AtSubmissionFilingGrp/ RefundDisbursementGrp)	Deposit account number of the final known destination of the refund, Ultimate Bank Account	
5	Temporary Bank Account Indicator (TemporaryBankAccountInd)	Ultimate bank account provided is a temporary account (proxy account) as the final Ultimate Bank Account is not known at the time of filing	• 0 (No or False) – UBA is **Not** a proxy card | temporary account • 1 (Yes or True) – UBA **Is** a proxy card | temporary account
6	Refund Product Customer Identification Program Code (RefundProductCIPCd)	Within a Refund Product, signifies documentary or non-documentary CIP with or without a Prepaid Card election. Only for returns that have a refund settlement product, when the CIP is completed within the tax preparation software and before the return is filed, signifies documentary or documentary CIP with or without Prepaid Card election.	• 0 – Not Applicable • 1 – Documentary CIP for Refund Product • 2 – Non-documentary CIP for Refund Product • 3 – Documentary CIP for the Refund Product; Non-documentary CIP for the Prepaid Card • 4 – Non-documentary CIP for the Refund Product; Non-documentary CIP for the Prepaid Card • 5 – Documentary CIP for the Refund

No.	Element	Description	Values
			Product; Documentary CIP for the Prepaid Card

Scenario A: Refund Product Selected

Taxpayer elects a refund product and chooses how to receive access to the tax refund from their refund product.

	Description	Refund Product Election Indicator	Refund Disbursement Cd	Tax Return Bank Account	Temporary Account Indicator	Ultimate Bank Account	Refund Product CIP Code	Comments
A	Direct Deposit to a **new** reloadable Prepaid Card	Yes	1	Refund Product RTN | DAN	0	Bank Holding Account RTN | DAN	3,4 or 5	UBA is known
B	Direct Deposit to a **new** reloadable Prepaid Card	Yes	1	Refund Product RTN | DAN	1	Proxy Card Number	3,4 or 5	UBA is not known
C	Direct Deposit to existing bank acct	Yes	2	Refund Product RTN | DAN	0	Taxpayer Bank Acct RTN | DAN	1 or 2	The subsequent deposit RTN/DAN provided by the taxpayer may be any traditional bank account including checking, savings, or a prepaid card account. Without asking the taxpayer what type it is, there is no systemic way to determine the existing bank account type
D	A check from	Yes	3	Refund Product	0	<Null>	1 or	

Official Use Only

	Description	Refund Product Election Indicator	Refund Disbursement Cd	Tax Return Bank Account	Temporary Account Indicator	Ultimate Bank Account	Refund Product CIP Code	Comments
	the ERO			RTN | DAN			2	
E	Converted to a non-financial product (e.g. merchant gift card)	Yes	4	Refund Product RTN |DAN or <Null>	0	<Null>	1 or 2	
F	Cryptocurrency	Yes	5	Refund Product RTN | DAN or <Null>	0	Taxpayer Bank Acct RTN | DAN or <Null>	1 or 2	The subsequent deposit RTN/DAN provided by the taxpayer coin/cryptocurrency account
G	Other 1	Yes	7	Refund Product RTN | DAN or <Null>	0	Taxpayer Bank Acct RTN | DAN or <Null>	1 or 2	The subsequent deposit RTN/DAN provided by the taxpayer

Customer Identification Program When a Refund Product is Selected

- CIP is mandatory to receive a Refund Product. The Refund Product provider (bank) will not receive a deposit of the tax refund in the event a taxpayer fails CIP. If there is a Refund Product, assume CIP was passed.
- CIP is mandatory to activate a "reloadable" prepaid card. Only "reloadable" prepaid cards can receive tax refund deposits. If there is a prepaid card receiving a tax refund deposit, you should assume CIP was passed.

Preparer	Ultimate Bank Account Type	CIP Performed for UBA	Refund Product CIP Indicator	Description
ERO	Bank Account	N/A	1	Documentary CIP for Refund Product
Do-It-Yourself (DIY) Online	Bank Account	N/A	2	Non-documentary CIP for Refund Product
ERO	New Prepaid Card	No	3	• Documentary CIP for the Refund

Preparer	Ultimate Bank Account Type	CIP Performed for UBA	Refund Product CIP Indicator	Description
				Product • Non-Documentary CIP for the Prepaid card
DIY Online	New Prepaid Card	N/A	4	• Non-documentary CIP for the Refund Product • Non-documentary CIP for the Prepaid Card
ERO	New Prepaid Card	Yes	5	• Documentary CIP for the Refund Product • Documentary CIP for the Prepaid Card

Scenario B: No Refund Product Selected or No Refund Due

The taxpayer does not choose a refund product and selects one of the disbursement methods below, or the return does not result in a refund (e.g. balance due or credit elect).

- **Balance Due or Zero Balance:** the tax return is a balance due or a zero balance, then there will be no Ultimate Bank account.
- **Default Method (Paper Check or State Issued Debit Card or Prepaid Card):** Taxpayer's who elect to default to a states or the IRS's primary refund disbursement method, predominantly a check mailed to the taxpayer's home, but could also be a state issued debit card or prepaid card, there will be no Ultimate Bank account, but could also be a state issued debit card or prepaid card, there will be no UBA.
- **Direct Deposit:** Taxpayer's may elect a direct deposit into an existing bank account provided by the taxpayer. In these cases, refunds are issued directly from the Treasury or the state into a taxpayer's bank account and the Ultimate Bank account will be the taxpayer provided bank account. For this purpose, a taxpayer-provided bank account could be a checking account, savings account, or a reloadable prepaid card acquired from channels outside of the tax preparation (e.g. sold off a j-hook[6] rack at a grocery store).

[6] J-hook refers to a situation where a taxpayer purchases a reloadable prepaid card in a retail store off a display rack and passes CIP before any additional loads, including tax refunds, are permitted.

- **Cryptocurrency:** A virtual currency obtained through the tax return provider at the time of tax preparation or filing. This is considered a separate and distinct disbursement option.
- **Merchant Gift Cards:** Some tax preparation providers may offer taxpayers the option to have their refund loaded onto a merchant gift card from the bank account the taxpayer provided for direct deposit.

	Description	Refund Product Election Indicator	Refund Disbursement Code	Temporary Bank Account	Tax Return Bank Account	Ultimate Bank Account	Refund Product CIP Code
A	Balance Due / Zero Balance	No	0	0	<Null>	<Null>	0

C	Direct Deposit	No	2	0	Taxpayer Bank Acct RTN/DAN **(Same>>)**	Taxpayer Bank Acct RTN/DAN **(<<Same)**	0
D	Default	No	3	0	<Null>	<Null>	0
E	Merchant Gift Card	No	4	0	Taxpayer Bank Acct RTN/DAN	Taxpayer Bank Acct RTN/DAN	0
F	Cryptocurrency	No	5	0	Taxpayer Bank Acct RTN/DAN **(Same>>)**	Taxpayer Bank Acct RTN/DAN **(<<Same)**	0
G	Credit Elect	No	6	0	**<Null>**	**<Null>**	0
H	Other 1	No	7	0	Taxpayer Bank Acct RTN/DAN **(Same>>)**	Taxpayer Bank Acct RTN/DAN **(<<Same)**	0

Customer Identification Program When No Refund Product Selected or No Refund Due

The Customer Identification program code (RefundProductCIPCd) should always be "0" when no refund product is selected or there is no refund due. However, the USA PATRIOT Act requires financial service providers to perform CIP to open a bank account or a reloadable prepaid card. If the refund is directed to an RTN/DAN which is provided by the taxpayer at the time of tax preparation or filing, you can assume that the CIP has been previously performed by the financial services provider of the RTN/DAN where the refund is deposited.

CIP is not required at the time of tax return filing when no Refund Product or new Prepaid Card election is made by the taxpayer. The U.S. Treasury and the states do not have a USA PATRIOT Act requirement to verify the identity of taxpayers. Therefore, guided by their individual governing regulations, it is assumed the IRS and the states have taken steps to validate taxpayer identity when directly issuing checks or state debit cards or prepaid cards.

Non-Refund Disbursements

During 2020 and 2021, there were several instances where the IRS had to disburse payments to the taxpayer that were not part of the initial return filing or subsequent refund. To increase the accuracy of these types of disbursements, should they continue, the following logic will be used to determine if the bank account information is eligible for a secondary deposit. These payments could be made due to stimulus payments, periodic advanced credit payments, adjustments made to the original return filing, or other scenarios that result in a second payment to the taxpayer. Failure to accurately code the Ultimate Bank Account fields will result in payments being issued to incorrect bank accounts, delays in getting the funds to the taxpayers, and incorrect banking information being provided to the taxpayer when they check to see where the payment went.

Non-Usable Bank Accounts

This applied to bank accounts provided with the filing of the return schema AND through IRS taxpayer portals.

- Refund Product Election Indicator is set to “Y”, Account number provided contains the SSN of the Primary or Secondary Taxpayer
- Routing Transit Number (RTN) is on the “do not use” for non-refund deposits

Usable Bank Accounts

The Software ID of the return being used is on the “use UBA” list. Then the Ultimate Bank account will be used.

Taxpayer elects a refund product (Refund Product Election Ind = Y)

- If the taxpayer elects a refund product **only** use the UBA if all the following conditions are met, if conditions are not met send via paper check or some other method other than the banking information linked to the return:
    - Refund Product election Ind = Y
    - Refund disbursement code is 1 or 2
    - UBA is not the same as the 1040 bank account (RoutingTransitNum (RTN) / DepositorAccountNum (DAN)

    - UBA does not contain a “T” in the first position of the UBA DAN
    - Temporary Account Indicator = N (valid in 2022)
- For all other scenarios where a banking product was elected the banking information reported with the return **cannot** be used to send a non-refund payment

Taxpayer did not elect a refund product (Refund Product Election Ind = N)

- If the refund disbursement code is 1 or 2.
    - If UBA is present non-refund payment can be sent to Ultimate Bank Account
- If the refund disbursement code is 0, and 1040 banking information is present. A non-refund payment can be sent to the 1040 RTN/DAN.
- If the refund disbursement code is 3, 4, 5, 6, or 7 none of the banking information reported on the return can be used for a non-refund payment.

Filing Security Data Elements

The additional security data elements support IRS fraud detection and improve submission integrity.

Federal Original Submission ID

The Federal Original Submission ID (FedearlOriginalSubmissionId) is a way of tracking resubmitted returns to the original filed return. This field must always contain a valid Submission ID when present in the return. Failure to use a valid submission ID in the Federal Original Submission ID, such as the same letter or number repeated 20 times, may result in processing delays for the submission. The table below explains the correct use of the Federal Original Submission ID.

Return Usage	Submission ID	Federal Original Submission ID
Original Submission	00000120170601111111a	00000120170601111111a Or Do Not Include Element
First Re-submission	00000120170602222222b	00000120170601111111a
Second Re-submission	00000120170603333333c	00000120170601111111a

Total Preparation Submission Timespan

Total Preparation Submission timespan (TotalPreparationSubmissionTs) captures the total elapsed time (in minutes) from the start of return preparation through submission, including both active and inactive periods. This field is reported as a minute-based integer with up to six digits. For example, ten hours should be reported as 600 (optionally zero-padded as 000600).

Total Active Time Preparation Submission Timespan

Total Active Time Preparation Submission timespan captures the total active time spent in the tax software (or related system process) preparing the tax return, up to the point where the return is completed and ready for submission.

Electronic Filing Identification Number (EFIN) Validation

EFIN validation is transitioning from a periodic, manual process to a secure, real-time service. The EFIN Validation service replaces the periodic Secure Data Transfer (SDT) validation process.

Software companies that develop e-file software must validate the ownership and status of each EFIN before selling or enabling use of their software. The service verifies EFIN information against authoritative IRS e-Services data and supports bulk validation of up to 1,000 records per request, returning a validation status for each record.

EFIN validation must be completed each filing season.

For technical requirements related to API request and response messages, including applicable data elements, refer to the EFIN specification documentation.

Vendor Control Number (VCN) Registration

VCN registration is transitioning from a periodic, manual process to a secure, real-time registration service. The VCN registration service replaces the periodic Secure Data Transfer (SDT) registration process.

For technical requirements related to API request and response messages, including applicable data elements, refer to the VCN API specification documentation.

Registration Process

Software companies that develop e-file software and provide e-file software to other Authorized IRS e-file Providers must register each EFIN and Software ID combination under their IRS-issued VCN.

A software company receives one unique IRS-issued VCN upon its first successful registration. This VCN remains the same and is used for all subsequent EFIN and Software ID registrations, including future filing seasons.

Registration Methods

Software companies may complete VCN registration using the following methods:

- **VCN Registration API**: Software companies that sell or provide e-file software to other Authorized IRS e-file Providers must register the applicable EFIN and Software ID combinations through the API. Bulk registration supports up to 1,000 records per request.
- **E-FILE Application**: Software companies that develop e-file software exclusively for their own organization and self-transmit returns, do not sell or provide software to other Authorized IRS e-file Providers, or operate as Online Providers may complete VCN registration through the E-FILE Application's Vendor Control Number Information page. Bulk registration is not available through the E-FILE Application.

Unregister Process

Software companies may also unregister all EFINs associated with a specified Software ID(s) or unregister an individual EFIN and Software ID combination. Unregistering (deleting) removes the applicable registration association without changing the company's IRS-issued VCN.

Supported Tax Years

The VCN Registration service supports the current tax year, the next tax year for quarterly business forms, and two prior tax years. Existing registrations (self-assigned VCNs) remain valid for supported prior tax years until those tax years are no longer eligible for e-file.

Annual Registration Requirements

VCN registration must be completed each filing season for newly issued tax year Software IDs. After obtaining the applicable Software IDs, register each EFIN and Software ID combination under your IRS-issued VCN before using those combinations for ATS or production filing. The same IRS-issued VCN must be used for both ATS and production. Placeholder VCNS should not be used.

Previous VCN Registration Process

Under the previous process, the IRS assigned the first two or three characters of the 16-character Vendor Control Number (VCN), and software companies assigned the remaining characters.

The new VCN Registration service replaces this process. Under the new service, the IRS generates and maintains the complete 16-character VCN, and software companies will no longer self-assign new VCNs. Self-assigned VCNs may continue to be used for applicable prior-year filings.

Modernized e-File (MeF) Filing Treatment

The VendorControlNum element is required in all Business Return Header Schemas and must be included with each submission. Returns submitted without a Vendor Control Number (VCN) will fail schema validation.

For Processing Year 2027, VCN information that does not match IRS registration records will generate an alert and the submission will receive a conditional acceptance. The return will not be rejected solely because of a VCN mismatch. Beginning in Processing Year 2028, submissions with mismatched VCN information will be rejected.

Security Summit Data Elements Definitions and Enumerations

Data Element	Description / Enumerations	Tax Type
BankAccountDataCapturedTs	Bank Account Data Captured Timestamp captures the date and time when the bank account information was captured (entered) during submission creation. If additional time is needed to implement this, the date and time when the submission is filed may be used as a temporary alternative	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990PF, 990T, 1041, 1042, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 4720, 5330, 8038CP, 8849
RefundDisbursementCd	• 0 = Balance Due / Zero Balance Due • 1 = Reloadable Prepaid Card • 2 = Bank Account • 3 = Paper Check • 4 = Non-reloadable Merchant Gift Card • 5 = Cryptocurrency • 6 = Other 1 • 7 = Other 2	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990PF, 990T, 1041, 1042, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 4720, 5330, 8038CP, 8849
TemporaryBankAccountInd	Boolean Indicator (Yes/No) • 0 = UBA is **Not** a proxy card | temporary account • 1 = UBA **Is** a proxy card | temporary account	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990PF, 990T, 1041, 1042, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 4720, 5330, 8038CP, 8849
TrustedCustomerCd	• 0 = New taxpayer- New to the software and/or preparer • 1 = Returning taxpayer online- DIY returning to the same online software/same account • 2 = Returning taxpayer to the same tax preparer- Returning to the same firm (EFIN) or preparer (PTIN) • 3 = Returning taxpayer to	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 1139, 2290, 4720, 5227, 5330, 8038CP, 8849

Data Element	Description / Enumerations	Tax Type
	the same pro-software-Returning to the same software	
OOBSecurityVerificationCd	• 00 = Can't send email • 01 = Bounced email • 02 = Sent email one way • 03 = Full Out of Band - Email • 04 = Can't send Text • 05 = Bounced Text • 06 = Delivered Text – one-way • 07 = Full Out of Band - Text • 08 = Random 3rd Party Security Questions • 09 = Security Questions established by Industry • 10 = Security Questions established by Customer • 11 = Other Pass • 12 = Other Fail	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
LastSubmissionRqrOOBCd	Does the IP Address at final submission match prior login IP • 0 - Match • 1 - No Match	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
PaymentReasonCd	• 0 = DECLINED • 1 = APPROVED • 2 = UNABLE TO VERIFY (Credit Card Payment Denied >2 for software purchases)	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
ProfileUserNameChangeInd	Checkbox Indicator • Checked = Yes • Unchecked = No	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC,

Data Element	Description / Enumerations	Tax Type
		1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
ProfilePasswordChangeInd	Checkbox Indicator • Checked = Yes • Unchecked = No	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
ProfileEmailAddressChangeInd	Checkbox Indicator • Checked = Yes • Unchecked = No	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
ProfileCellPhoneNumChangeInd	Checkbox Indicator • Checked = Yes • Unchecked = No	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
FilingLicenseTypeCd	• S = Self-Filer - Business who files using their own software • P = Professional - Filing using professional software • O = Online Filer - Filing using an online industry product	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
TotalPreparationSubmissionTs	Captures the total elapsed time (in minutes) from the start of return preparation through submission, including both active and inactive periods.	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC,

Data Element	Description / Enumerations	Tax Type
	Reported as a minute-based integer with up to six digits.	1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
TotActiveTimePrepSubmissionTs	Captures the total active time spent in the tax software (or related system process) preparing the tax return, up to the point where the return is completed and ready for submission. Reported as a minute-based integer with up to six digits.	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
AuthenticationReviewCd	• 0 = IMF AUTH • 1 = BMF AUTH • 2 = TRUSTED CUST • 3 = LEADS • 4 = SCHEME • 5 = AUTHENTICATION • 6 = SSN DUP • 7 = OTHER	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 10415IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849
VendorControlNum	16 characters (alpha-numeric)	709, 709NA, 720, 940, 941, 941X, 943, 943X, 944, 945, 945X, 990, 990EZ, 990N, 990PF, 990T, 1041, 1042, 1045IND, 1045EST, 1065, 1120, 1120F, 1120H, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 4720, 5227, 5330, 8038CP, 8849

Security Summit Data Elements Business Rules

Rule Number	Information	Rule Text	Severity	Rule Bypass
R0000-222	Signing Officer	'PersonFirstNm' and 'PersonLastNm' in 'SigningOfficerGrp' in the Return Header must have a value.	Alert	None
R0000-223	Signing Officer	'SSN' in 'SigningOfficerGrp' in the Return Header must have a value.	Alert	None
R0000-224	Total Prior Year Income	'TotalPriorYearIncomeAmt' in 'FilingSecurityInformation' in the Return Header must have a value.	Alert	None
R0000-244	IP Address	The IP Address at the time of submission filing in the Return Header must have a valid value.	Reject and Stop	None

Rule Number	Information	Rule Text	Severity	Rule Bypass
R0000-245	Ultimate Bank Account	'RoutingTransitNum' in 'AtSubmissionCreationGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	Bypass rule will apply if Refund Disbursement Code is 0, 3, 4, 6 or 7
R0000-246	Ultimate Bank Account	'DepositorAccountNum' in 'AtSubmissionCreationGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	Bypass rule will apply if Refund Disbursement Code is 0, 3, 4, 6 or 7
R0000-247	Ultimate Bank Account	'BankAccountDataCapturedTs' in 'AtSubmissionCreationGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	Bypass rule will apply if Refund Disbursement Code is 0, 3, 4, 6 or 7
R0000-248	Ultimate Bank Account	'RefundProductElectionInd' in 'AtSubmissionFilingGrp' in 'AdditionalFilerInformation' must have a choice of "Yes" or "No" indicated.	Reject and Stop	None
R0000-249	Ultimate Bank Account	'RefundDisbursementCd' in each 'RefundDisbursementGrp' in 'AtSubmissionFilingGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	None
R0000-250	Ultimate Bank Account	'RoutingTransitNum' in each 'RefundDisbursementGrp' in 'AtSubmissionFilingGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	Bypass rule will apply if Refund Disbursement Code is 0, 3, 4, 6 or 7
R0000-251	Ultimate Bank Account	'DepositorAccountNum' in each 'RefundDisbursementGrp' in 'AtSubmissionFilingGrp' in 'AdditionalFilerInformation' in the Return Header must have a value.	Reject and Stop	Bypass rule will apply if Refund Disbursement Code is 0, 3, 4, 6 or 7
R0000-263	Vendor Control Number	The EFIN associated with this submission is not authorized for e-filing. Please verify that your software package has been registered and approved to transmit returns.	Alert	None

Known Issues

Item Number	Date Opened	Issue	Resolution	Status

Appendix A: Client Based Device ID: Windows Operating System

This is the latest code release for the IRS Device ID desktop software implementation for Windows. New code releases are typically distributed by early September. The attached Windows VBS script can be used to generate the Device ID for desktop software on a Windows operating system. The attached file is named “IRS Windows DeviceID Generator.abc”. To use this script, save the file and rename it removing the .abc file extension and replacing it with the .vbs file extension instead. Once renamed, double-click on the file to generate the Windows Desktop Software Device ID on any Windows machine. The Device ID generated by this script should be compared with the Device ID generated by your own software to make sure both sets of code produce the same Device ID.

Windows DeviceID Generator - Complete

Appendix B: Client Based Device ID: Mac OSX

This is the latest code release for the IRS Device ID desktop software implementation for Mac OSX. New code releases are typically distributed by early September. The attached .zip file can be used to generate the Device ID for desktop software using Mac OSX. The attached file is named “MacOSX DeviceID Generator.zip.abc”. To use this generator, save the file and rename it removing the .abc file extension leaving the filename “MacOSX DeviceID Generator.zip”. Once renamed, extract the entire contents of the .zip file into a folder on the user’s Mac OSX computer. Follow the instructions in the “readme.txt” file contained within the .zip file to use the scripts properly. The Device ID generated by this script should be compared with the Device ID generated by your own software to make sure both sets of code produce the same Device ID.

MacOSX DeviceID Generator - Complete

Appendix C: Browser-Based Device ID JavaScript

This is the latest code release for the IRS Device ID browser-based implementation. New code releases are typically distributed by early September. The attached .zip file can be used to generate the Device ID for browsers. The attached file is named “IRS DeviceID SHA-1 code for TY2026.zip.abc” or “IRS DeviceID SHA-256 code for TY2026.zip.abc”. To use this generator, save the file as “IRS DeviceID SHA-1 code for TY2026.zip” or “IRS DeviceID SHA-256 code for TY2026.zip”. Once renamed, extract the entire contents of the .zip file into a folder on the user’s computer. Double click on the “index.html” file contained within the .zip file to use the scripts properly. The Device ID generated by this script should be compared with the Device ID generated by your own software to make sure both sets of code produce the same Device ID.

IRS DeviceID SHA-1 code for TY2026

IRS DeviceID SHA-256 code for TY2026
